SITUATION

Code Ready Solutions is a team of technology professionals comprised of consultants, researchers, programmers, graphic designers, animators, system engineers, quality assurance teams, project managers and business analysts

“The Web GUI improvements in A10’s AX Series firmware upgrade increase our staff’s efficiency with a consolidated view of network and application performance metrics within a single screen. We rely on A10’s aFlex Layer 7 scripting to distribute traffic to multiple Websites, and in a complex environment, ease of management and a quick view of real-time statistics are critical.”

Tom Roberts, Director of IT for Code Ready Solutions

who in collaboration engineer technology solutions for companies and organizations across the globe.

SOLUTION

Code Ready maintains a server farm to conduct business and often runs multiple Websites on the same server with the same IP address. To ensure its servers are always performing and available, Code Ready required a high-performance server load balancing solution. Upon the recommendation of Value Added Reseller (VAR) DataLink Associates Corp., Code Ready selected A10’s AX Series server load balancers due to essential flexibility gained by aFlex technology and the industry leading price/performance.

SUCCESS

Code Ready leverages AX Series’ aFlex Layer 7 scripting tool to distribute traffic accurately across the numerous Websites it operates. Also the AX Series’ GUI (see page 2) provides a consolidated view of network, application and performance metrics within a single screen, efficiently providing a snapshot of real-time statistics.

“In addition to delivering twice the performance at half the price of competitors, A10 Networks also delivers on support and user focused upgrades. The improved Web GUI within AX Series helps our customers increase operational efficiency, reducing cost for the organization and making life easier for the administrators.”

Andrew Martin, Senior Partner for DataLink Associates Corp.

ABOUT AX SERIES

A10 Networks' AX Series is the industry's best price/performance advanced traffic manager - helping enterprises and ISPs maximize application availability through a high-performance and scalable Web Application Delivery platform. The AX's Advanced Core Operating System (ACOS) has garnered the company numerous awards and is revolutionary due to its true symmetrical multi-processing (SMP) architecture. AX includes an optimized multi-CPU platform built from the ground up that leaps the competition in terms of performance, scalability and reliability.
