

THE APPLICATION DELIVERY CONTROLLER TOP 10 CHECKLIST

ENSURE YOUR APPLICATIONS ARE HIGHLY AVAILABLE, ACCELERATED AND SECURE

1

Multi-Tenancy

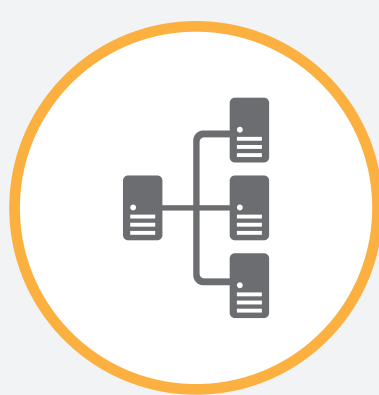

High ADC partition density offers dedicated policy support to individual applications, services and users.

Advanced SSL Performance

Process 2048-bit certificates at scale and enable innovative encryption methods including Elliptic Curve Cryptography and Perfect Forward Secrecy.

2

SSL

3

Beyond Load Balancing

Consolidate traffic management, accelerated data delivery and security in one appliance for best ROI.

All-Inclusive Licensing

Shouldn't have to pay more for every feature.

4

5

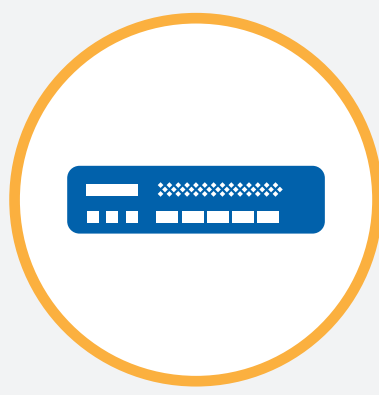

Security Minded

Application level security to protect vulnerable servers, stop advanced DDoS attacks and ensure authentication.

Works in the Cloud

Improves agility and reduces infrastructure costs, integrating seamlessly with cloud networking technologies.

6

7

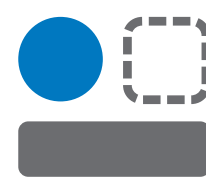

Superior Hardware Design

When high-performance matters, you need best-in-class hardware for desired purpose or performance level.

Choice of Form Factor

Choice of delivery options including physical, virtual, hybrid and also in the cloud.

8

9

Ease of Use

Flexible scripting, RESTful APIs and a standard interface quicken installation, broaden deployment options and lowers CAPEX.

Superior Support

It's not just about the product but also how the vendor supports you after deployment.

10
